Professionally - **Kotlin, Java, React Native**

For personal projects - **Python, node.js**

🏢 Work experience

Mobile Team Lead @ OANDA *Poland – (March 2023 - Present)*

I lead a team of 8, developing a global, mobile trading app. I transformed the team into a predictable one, with regular release cadence and easy to collaborate with others. The team was praised multiple times for a model behavior. We've significantly reduced the technical debt of our 12-year-old product and successfully introduced up-to-date tooling. We are transforming the native app into a React Native one, consolidating our tech stack further improve the delivery.

Engineering Manager @ nomtek *Wroclaw, Poland – (May 2020 - February 2023)*

Collaborated with the CEO on engineering and hiring strategies. Led a team of 26 engineers, with some developing into leadership roles. Conducted one-on-one meetings, managed traffic across projects, and built recruitment & vendor pipelines. As a result of effective cooperation with the sales team, the company increased its revenue every quarter.

Co-Founder / Developer @ Stayhome *Wroclaw, Poland – (Mar 2020 - Jun 2020)*

Acquired small funding and co-created a startup aimed at helping local restaurants survive the early pandemic stage by organizing online cooking workshops. I leveraged Zoom and Gmail API with a next.js web app to build a proof of concept of the platform.

Co-Founder / Developer @ DeeLe *Wroclaw, Poland / Manila, Philippines – (Jun 2018 - Mar 2020)*

Brought technical skills into a startup building a chatbot for streetwear product recommendations. Used Python Flask, Google NLP API, Facebook Messenger API, and several low-code tools to quickly iterate and test our PoC.

React Native Developer @ nomtek *Wroclaw, Poland – (May 2018 - Mar 2019)*

Led a team of 2 React Native devs for a U.S. non-profit building a Video Player app. I was responsible for development and transforming translating requirements into backlog items. The most considerable technical challenge was the optimization of the custom video-streaming library and handling the download of large video files for offline usage.

Lead Android Developer @ nomtek *Wroclaw, Poland – (Feb 2013 - April 2020)*

Started as a junior Android developer and grew into a fully autonomous caretaker of several projects. For almost 2 years I developed and maintained the PONS Translate app that served over 2 million users. From early 2019 I led a team of 4 Android devs for Uproad - a highway tolling app. My focus was on battery performance & GPS tracking quality. I acted as a Mobile Architect that cooperated with two backend teams. Successfully launched MVP version of the app.

🗣 Languages

Polish 🇵🇱 Native speaker

English 🇺🇸 🇬🇧 Proficient speaker (C1)

🎓 Education

Master of Science Degree in Cybersecurity 2012 - 2014

Engineers' Degree in Computer Science 2009 - 2012
University of Technology - Wroclaw

🏃 My hobbies

I like to read in my free time - check out my Goodreads. In 2025 I decided to write regularly on Substack. To clear my head I jog and learn tricks on a jump rope.
